

Points & Miles — Reference

CPP Valuations (2025)

CPP = cents per point. How much one point is worth in travel value at a good redemption. Triangulated from TPG, NerdWallet, and Upgraded Points as of mid-2025.

Program	CPP range	Best redemption	Floor (worst use)
Chase Ultimate Rewards	1.8–2.05¢	Transfer to Hyatt or United (Star Alliance)	1.0¢ cash back / 1.5¢ portal
Amex Membership Rewards	1.8–2.2¢	Air France Flying Blue, ANA	0.6¢ gift cards
Capital One Miles	1.7–1.85¢	Turkish Miles&Smiles, Air Canada Aeroplan	1.0¢ cash back / 1.25¢ portal
AA AAdvantage	1.5–1.7¢	Partner awards (Cathay Pacific, Qatar)	—
Southwest Rapid Rewards	~1.5¢	Revenue-based; nearly fixed CPP	—
United MileagePlus	1.2–1.35¢	Saver awards on Star Alliance partners	—
Delta SkyMiles	1.1–1.2¢	Off-peak domestic, Flash sales	—
World of Hyatt	1.5–1.7¢	Category 1–4 properties	—
Marriott Bonvoy	0.6–0.7¢	Generally poor transfer destination	—

Delta and Marriott have the widest floor-to-ceiling spread. Show a range for these programs, not a single number.

Best Non-Obvious Transfer Paths

The pipeline should flag these automatically when the relevant airline appears in search results.

Amex MR → Air France Flying Blue → Delta flights Flying Blue often prices Delta transcon routes at 7,500–12,500 miles vs. 25,000+ SkyMiles. This is the main way to book Delta flights at better value than Delta's own program. Flag any time Delta appears in results and user has Amex MR.

Chase UR → Hyatt Consistently returns 2.5–4.0¢/pt at Park Hyatt properties vs. the 2.05¢ program average. Not flight-specific but worth surfacing if the itinerary involves a hotel night.

Amex MR → ANA Mileage Club Round-trip business class to Japan ~88k miles, no fuel surcharges.

Amex MR → Virgin Atlantic → Delta One transatlantic ~50k miles one-way, often better than Delta's own SkyMiles rate.

Capital One → Turkish Miles&Smiles Domestic US Star Alliance awards from 7,500 miles each way. Can be dramatically cheaper than United MileagePlus on the same United flight.

Transfer Bonuses (Time-Sensitive)

These are periodic promotions that temporarily increase effective CPP. The pipeline should flag when one is active.

Transfer	Frequency	Typical bonus
Amex MR → Flying Blue	2–3x/year (Jan, May, Oct pattern)	25–30%
Amex MR → Avianca LifeMiles	1–2x/year	20–25%
Amex MR → British Airways Avios	~1x/year	25–30%
Amex MR → Virgin Atlantic	1–2x/year	20–30%
Chase UR → United	Rare, ~1x/year	10–20%

Store with `active_from` / `active_until` timestamps. Recalculate effective CPP when a bonus is active.

What the Pipeline Surfaces Automatically

Never recommends definitively. Surfaces the math; user decides.

- Cash-equivalent value:** "Using 45,000 SkyMiles on this flight values each mile at 1.4¢ — above the 1.2¢ typical estimate. Reasonable redemption."
 - Flag when cash beats points:** "Cash price \$180. Redeeming 30,000 Chase UR through the portal at 1.0¢ = \$300 equivalent. Buy cash."
 - Flag transfer opportunity:** "You could transfer Amex MR to Flying Blue and book this Delta flight for ~10,000 miles instead of 25,000 SkyMiles."
 - Flag active bonus:** "Amex MR → Flying Blue currently has a 30% transfer bonus. Effective CPP increases to ~2.6¢."
